About Me

- Self-employed for almost 20 years
- Hardware and software development in the standard closed source system
- 7B Industries
 - Outlet for passion for open culture and open technology

About Me

- Involved in open source software
 - User 15+ years
 - Contributor 10+ years
- CadQuery^[1]

About Me

- Involved in open hardware for 10 years
- Mach 30^[2]

Credit: Jeremy Wright

Talk Goals

- Start a conversation
 - I do not have the answers
- High Level
 - OScH Income generation
 - Positive Loop Between Practitioners and Developers
 - Reduce dependence on other funding sources (grants)

Definitions

- **Practitioners** – Researchers, occupational therapists, etc
 - People in the field doing the work
- **Developers** – Hardware developers, software developers, etc
 - 7B Industries^[5]
 - Non-profit

Income Generation

- Kit Sales
 - Reduces cost for developer
 - Encourages consumers to understand their purchased product better (so they can modify it)
 - Slightly decreases regulatory restrictions
- Continuous innovation (Sparkfun^[4] model)
 - Also helps when chasing products that do not pay their own way (Free Innovation)
- Cloning is a feature, not a bug
 - Form of distributed manufacturing
 - Crosses national boundaries I cannot
- 20%-30% rule^[7] for chasing free innovation, regardless of revenue potential
 - Counteracts tendency to chase market trends (hopefully)

Current Efforts

- Starting simple
- Push button switch^[6]
 - Adaptable to local contexts
- Squeeze switch
 - Uses simple materials

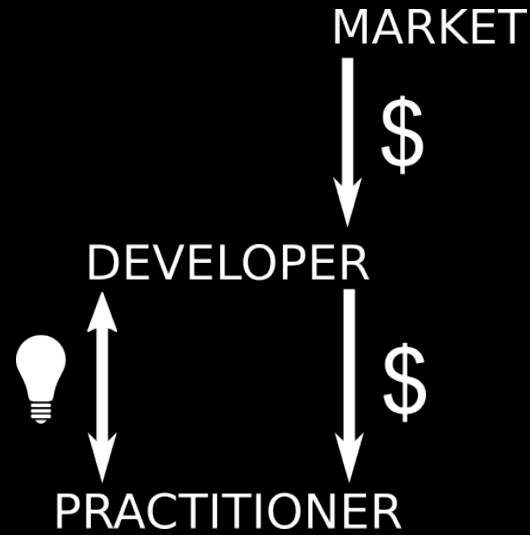

Income Loop

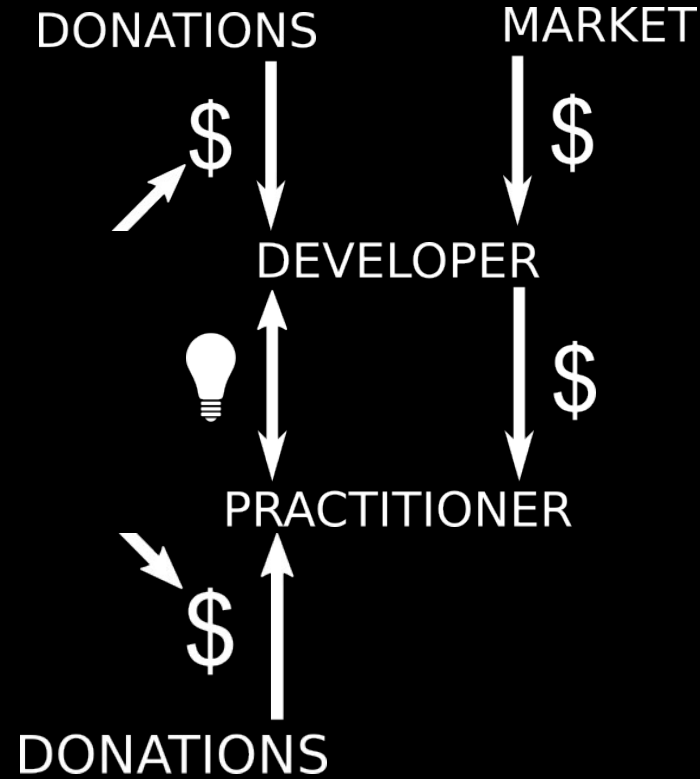

Income Loop

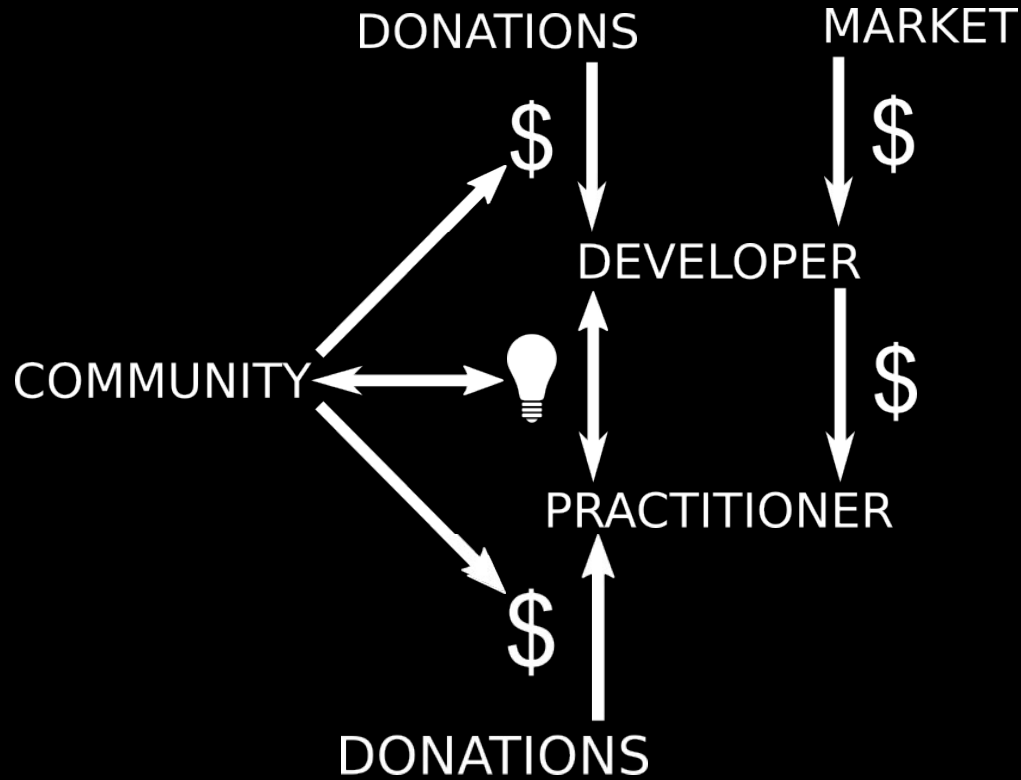

Income Loop

Income Loop

Income Loop

Income Loop

Income Loop

- Revenue sharing between developer(s) and practitioner(s)
 - How to define share of revenue
 - Static Percentage (“50/50 split”)
 - Slicing Pie^[3]
 - Tracked by software (von Hippel equation)
 - Value = Design + Communication + Production + Transaction
 - Research on Other Models?
- Practitioner income lags product development

Questions

- Who else is already doing this?
- What related research is available on sharing revenue in this context?
- Will researchers be interested in this model?
- Will this still just result in chasing market trends?
- Can a single paradigm work across regions (Global North vs Global South, across continents, etc)?
- Legal issues: such as liability for practitioners?
